The presentation was given by Mr. Bob Fisher, Executive Director of the Bayshore Regional Sewerage Authority, who educated the students on the community infrastructure of water, the wastewater treatment process and its relationship to clean, fresh water. The students were encouraged to enter an essay competition based on Mr. Fisher's presentation through a combination of hands-on demonstration, PowerPoint, and interactive activities. This is the second year that Mr. Fisher was invited to the Intermediate School, by the WTEAC, to explain the cycle of water on Earth and the five stages in wastewater treatment before being discharged back into the environment.
